

Workshop 3d

Smart home technology: an integrated platform

Speaker: Chris Jones, homelync

Chaired by: David Jervis

Room: Norfolk

National Housing
Maintenance Forum

NHMF
Maintenance
Conference
2019

10:00
10:05

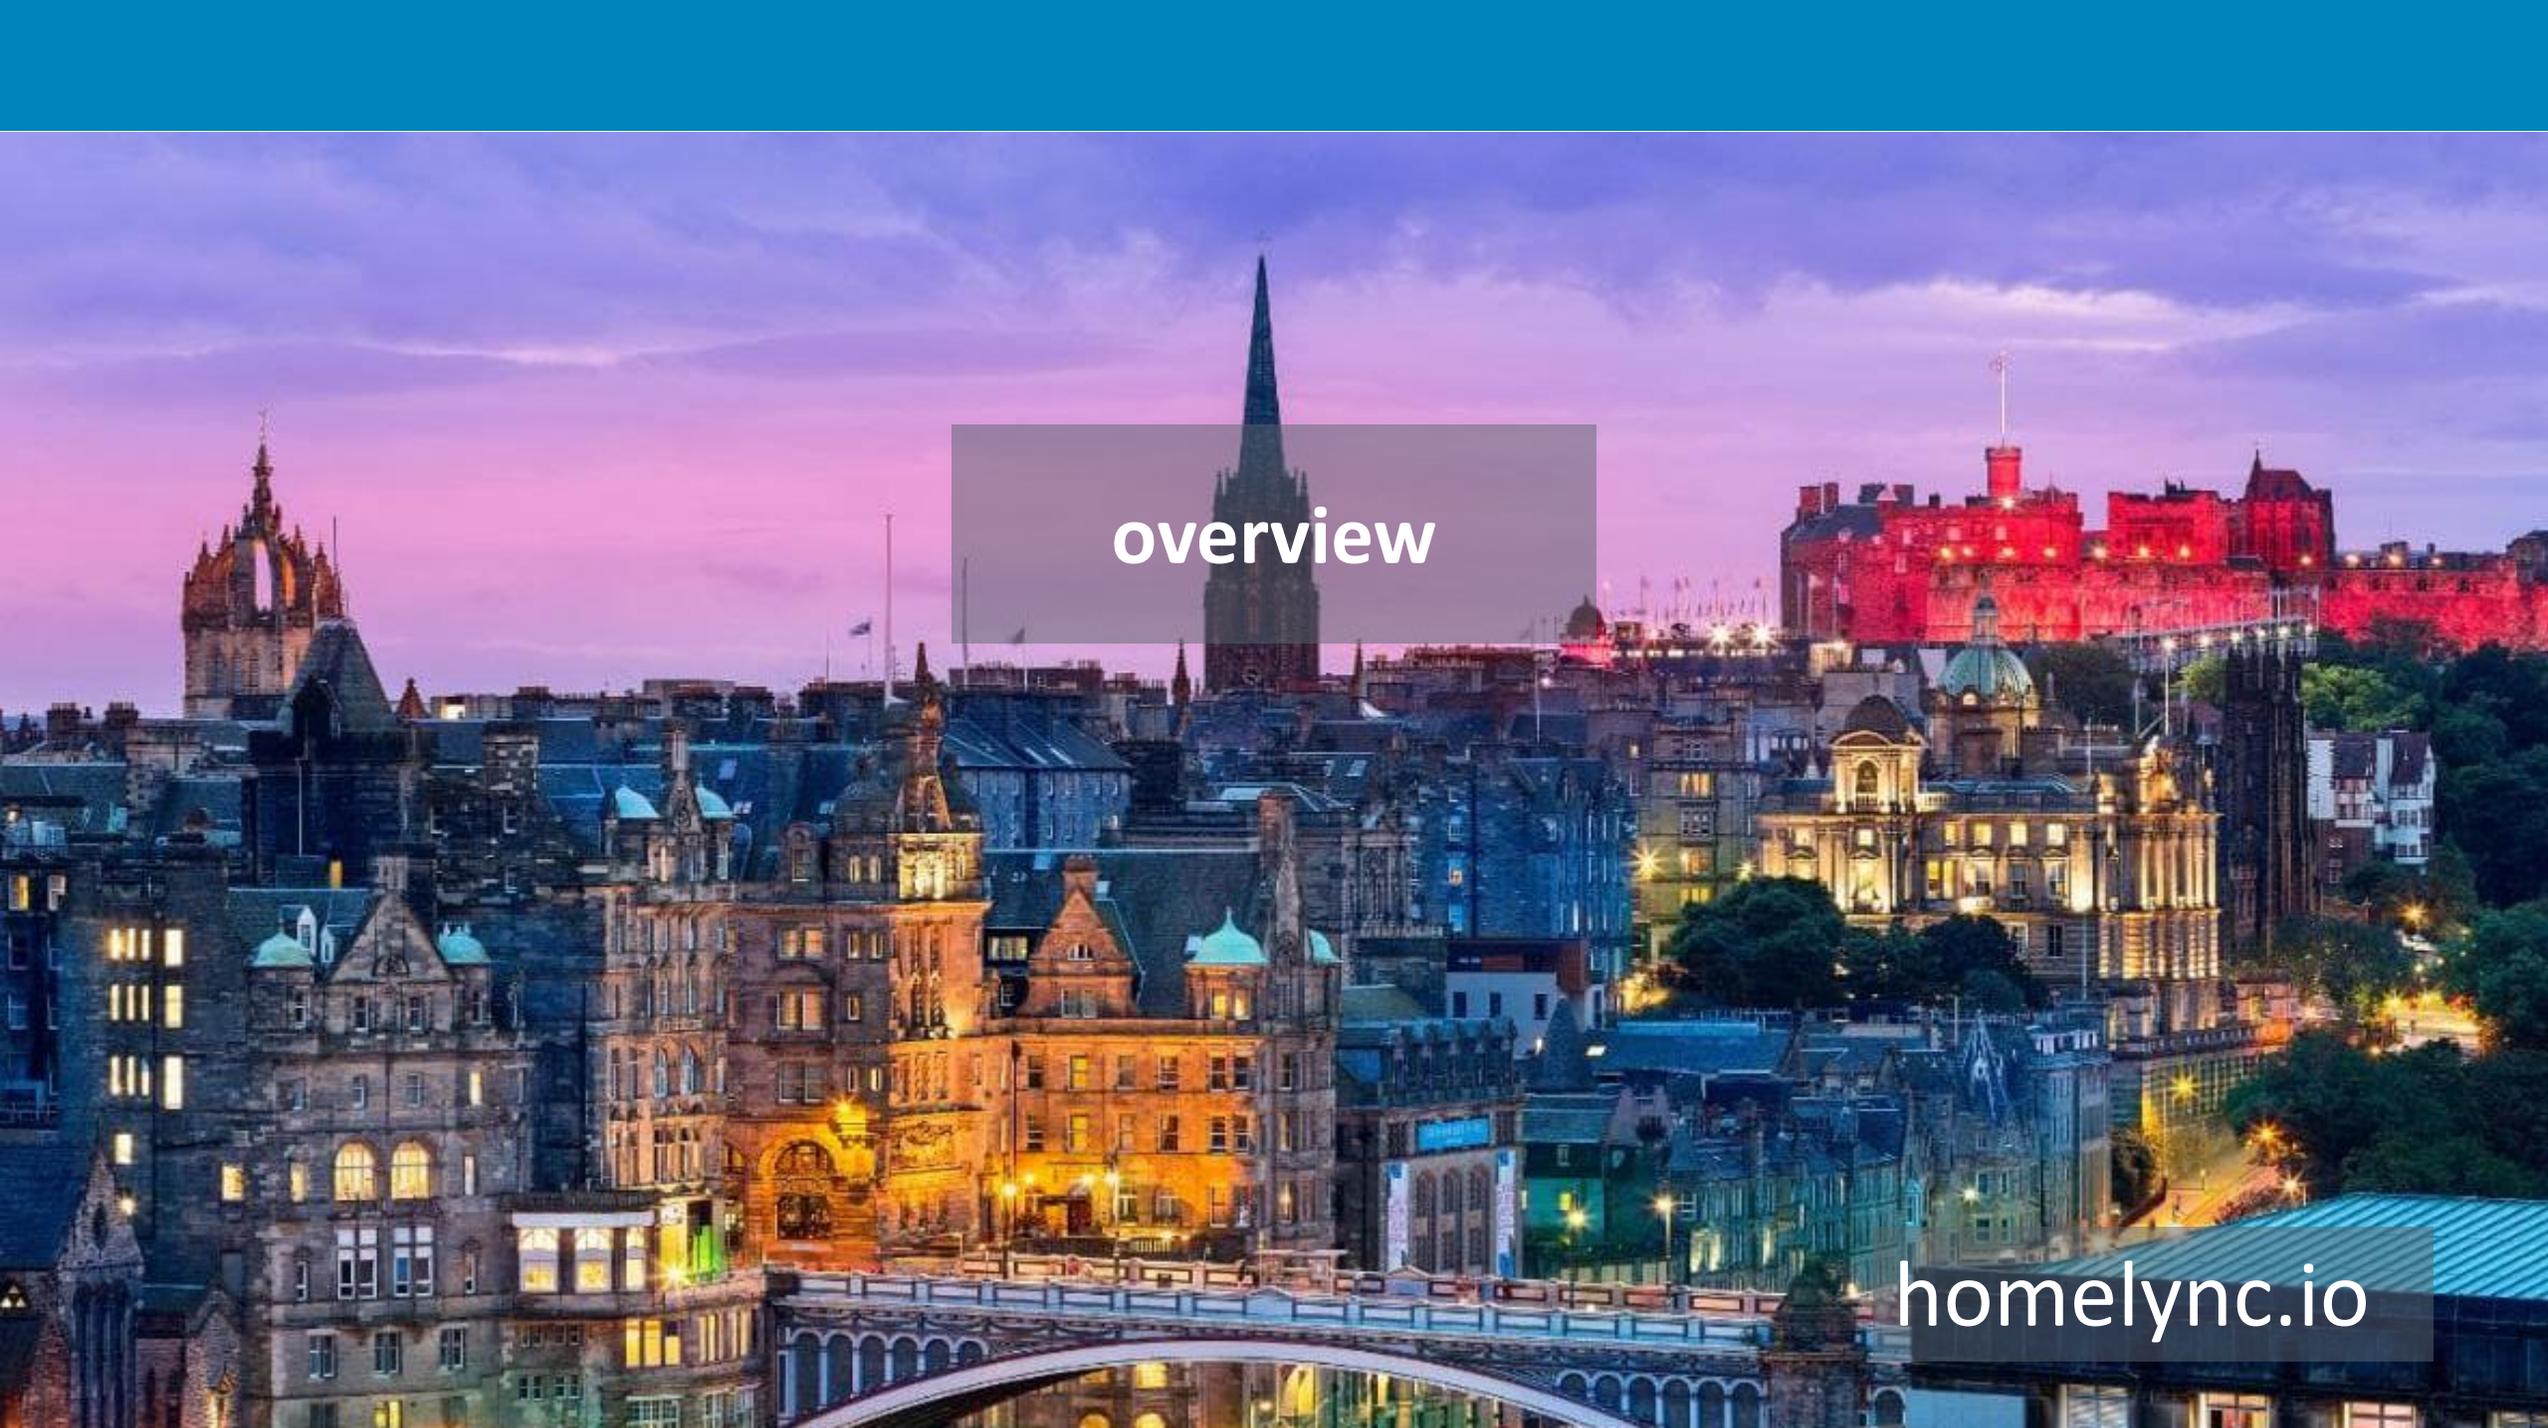

Will IoT integration deliver in the social housing sector?

homelync

homelync: an integrated approach to IoT

Chris Jones

A panoramic view of Edinburgh, Scotland, at dusk. The city is illuminated with warm yellow lights from windows and streetlights. The Spire of St. Paul's Cathedral is a prominent feature in the center. To the right, the Edinburgh Castle is illuminated in a vibrant red. The sky is a mix of purple and blue. A semi-transparent grey box with the word 'overview' is centered over the image.

overview

Objectives

- Improve process efficiency
- Proactively engage with assets

Results

- IoT deployment delivering expected savings
- Software designed to optimise process efficiency

Solution

- Integrated software and processes
- Integrated IoT deployment

Lessons

- Installation challenges
- Process complexity
- Supplier organisation

case study

challenge

How can technology help us improve services by better understanding investment requirements for our public buildings?

1. Design better processes
2. Optimise repairs and investment
3. Proactively engage with buildings

challenge

Gathering new data to inform better service design

A dashboard with performance indicators

Proactively engaging with buildings to uncover potential improvements

Ability to **scale** to meet other issues

Set exceptional standards, deliver better services & save money

challenge

austerity

1 in 5 homes

health & social care

poverty

**fuel
poverty**

25% of social housing
4,800 deaths in Scotland
rapid increase

“Excess winter deaths highest since 1970s, says ONS”
– BBC, 30 Nov 18

challenge

demo

business case

Save money and improves critical services...

Improve health, save money and benefit the environment...

£700,000 savings
reduce poverty
improve quality of life

1.3m kg CO₂ reduction
15m litres of water saved

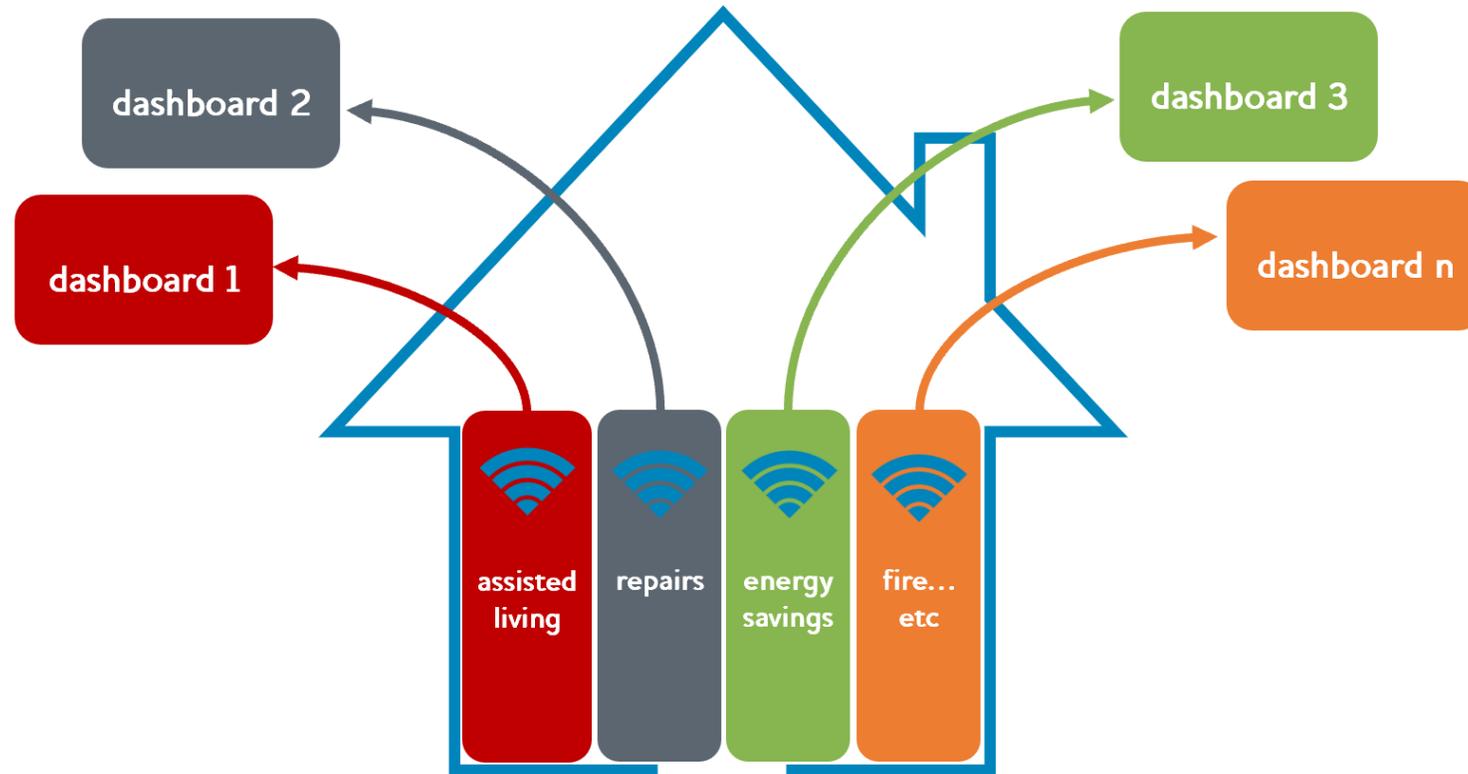

£5.4m net benefits

intro to homelync

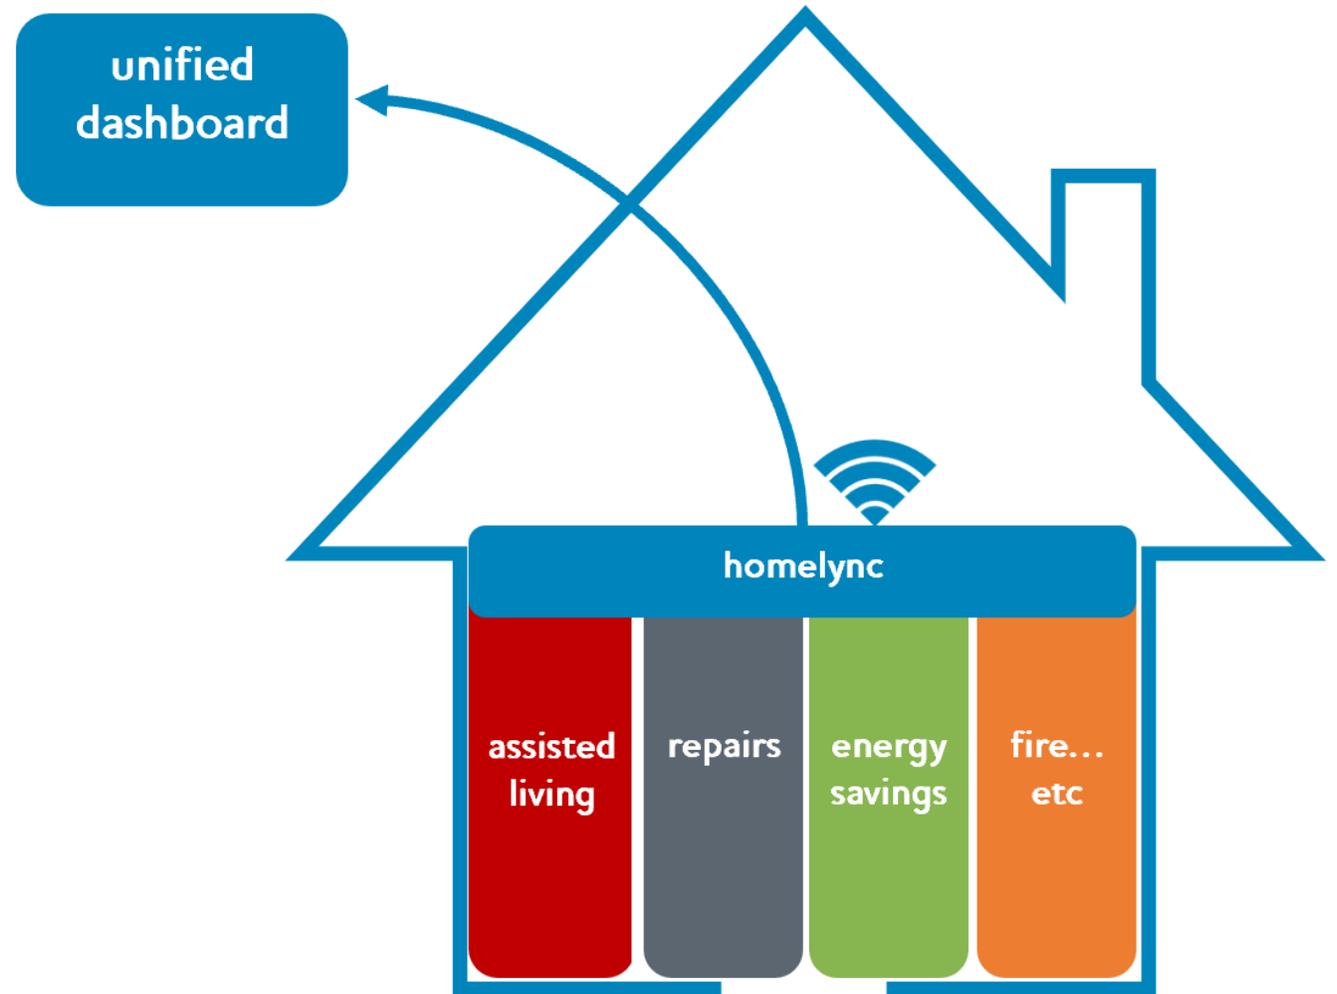

problem

solution

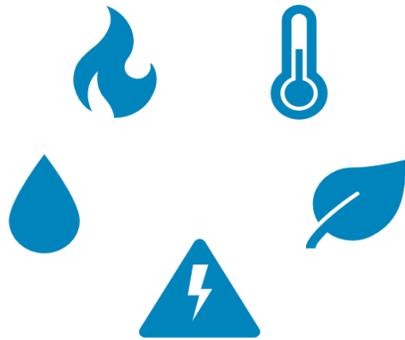

homelync breaks down technology siloes:

- one dashboard
- home hub
- advanced analytics

solution

sensor ecosystem

internet gateway

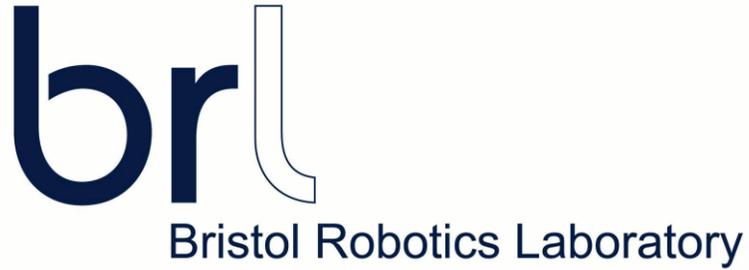

AI powered dashboard

historical property data

supporters

summary

Summary

challenge

1. design better processes
2. optimise repairs and maintenance
3. proactively engage with buildings

solution

1. integrating existing systems and processes
2. collaboration of IoT suppliers

results

1. benefits, integrations and process demonstrated
2. installation challenges
3. scale of business case

closing thoughts

- IoT adoption is set to accelerate
 - Has been through 'trough of disillusionment' but out the other end
 - Major boiler and fire alarm suppliers entering market
- Moving forward
 - Integrated approach reduces risk and generates more benefits
 - Challenges remain but can be overcome with collaboration

thank you
